

Since Shanghai-HK Stock Connect downturn for H. S. Index

Since 17-11-2014 Monday scheme of Shanghai-Hong Kong Stock Connect has launched.

However, quite strange HK's Heng Seng Index just tended to move downward, after this connection.

Moreover, this trend existed for NOT only a short period while up to days, & even weeks persistently. How would this downturn occur under the economic combination?

What it's deemed, this could be called an Effect of Northward-oriented financial movement from South. ----- That's as if, when it takes higher correlation between both places, thereafter financial movement will mainly be shifting from site where higher Gross Domestic Product (GDP) per capita like Hong Kong, to lower counterpart, such as Shanghai of Mainland China currently.

That situation is similar as, if building once more a cross-harbor tunnel to link between Hong Kong Island (where has higher GDP per capita), & Kowloon Peninsula what do you think about will furthermore rising, or lowering pressure be encountered after a while, for extensive residential property prices in (wealthier) Hong Kong Island? ,,.,.,,

From decline of Hong Kong financial Heng Seng Index, after coming into exercise for Shanghai-Hong Kong Stock Connect, I further reminisced about the Incident of Occupy-Legislative Yuan of Taiwan in 3/2014, for opposition of anti-Cross-Strait Trade Service Agreement, between Taiwan, & Mainland China. Similarly, it could be seen as a campaign to reflection the objection against this economic closer-link between Taiwan of higher GDP per capita, & Communist Mainland China.

For respect to rule of law, we HK Chinese certainly shall NOT urge for stop of this program of financial connect with the one of Shanghai casually! While on the other hand, be ought furthermore conservative attitude to adopted on development of such as, anticipated Shenzhen-HK Stock Connect in the coming future certainly.
